SUMMARY

Senior Backend Engineer with 4+ years of experience designing and building scalable, secure backend systems. Specialized in Python, Django, FastAPI, and Docker, with a strong focus on clean architecture, API design, and cloud-native development. Experienced in payment integrations, real-time features, and collaborating with ML teams on intelligent systems. Proficient in leading migrations, CI/CD, and containerized deployments.

CORE COMPETENCIES

- **Languages & Frameworks:** Python, Django, FastAPI, Flask, Celery, Redis
- **Infrastructure & DevOps:** Docker, Docker Swarm, GitHub Actions, AWS (S3, ECS, RDS), Terraform
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **APIs & Systems:** REST APIs, WebSockets, Firebase, Stripe, OpenAI APIs, CI/CD
- **Best Practices:** TDD, Clean Architecture, Agile, Asynchronous Programming, System Design

EXPERIENCE

Software Engineer – EDI GmbH, Karlsruhe, Germany | February 2023 – Present

- * Collaborate with ML engineers to develop and maintain Retrieval-Augmented Generation (RAG) services for document embedding and semantic search using Django and Milvus.
- * Deployed LLM models and integrated them into backend workflows
- * Contributed significantly to the backend development of the MVV bunker simulation project, implementing logic for calorific value (CV) backpropagation, validating real-time height sensor data, and developing crane automation algorithms based on waste distribution and dynamics.
- * Produced architecture documentation including component and class diagrams to drive system design and scalability.
- * Conducted code reviews to maintain high standards and ensure maintainability

Software Engineer – Logic, Athens, Greece | July 2022 – August 2024

- * Designed and delivered backend APIs using Django and FastAPI for multi-tenant SaaS applications in logistics and data analytics.
- * Implemented GitHub Actions CI/CD pipelines with Docker Swarm and Terraform, reducing deployment cycles by over 40%.
- * Modeled performant PostgreSQL and MySQL schemas to support large-scale data ingestion and analytics.
- * Introduced clean architecture principles and test coverage strategies, significantly improving codebase maintainability.

Backend Developer – GetKeel, Ontario, Canada | May 2021 – July 2022

- * Developed Django-based backend systems for user management, payments, and real-time notifications.
- * Orchestrated asynchronous job pipelines using Celery and Redis, enhancing responsiveness of email/SMS delivery and background task handling.
- * Tuned SQL performance and caching strategies, improving backend response times and reducing database load.

PROJECT HIGHLIGHTS

- * **Go4mi:** Built and led the backend for a real-time grocery delivery platform using Django, Paystack, Firebase, and Redis. Integrated WebSocket-based tracking and weekly payout automation. – **ongoing**
- * **DineTogether:** Architected a booking and dining-matching platform with Stripe subscription integration. Managed Django-based backend and FastAPI microservice for payments. - **ongoing**

EDUCATION

M.Sc. Computer Science – York St John University, United Kingdom (Jan 2024 – Jan 2025)

B.Sc. Computer Science – Olabisi Onabanjo University, Nigeria (Oct 2015 – Oct 2018)

ADDITIONAL

Languages: English (Fluent), Yoruba (Native), German (Elementary)

Interests: Classical music, football, nature walks
